

## **EXELIS and SULSOFT**

Presenter: Sr. Eduardo Iturrate

Exelis VIS and Sulsoft are coming to GEOBIA to present the recent changes to ENVI FX, our software application for object-based classification of satellite imagery. Highlights include:

- High-speed multi-threaded processing greatly improves performance.
- Streamlined user interface allows user to modify multiple parameters simultaneously and get instant preview results, greatly speeding up the process of refining parameter settings.
- More export options allows the user to utilize intermediate processing results in other analyses.
